

GAZI UNIVERSITY FACULTY OF MEDICINE
2017-2018 PHASE III
ENDOCRINE, REPRODUCTIVE AND GENITOURINARY SYSTEMS
COURSE COMMITTEE
January 19, 2018 – March 22 2018 (Semester holiday: Jan 21-Feb 2, 2018)
Exam : March 23, 2018, 9.30am

COURSES	THEORETICAL	PANEL	LAB	PRACTISE	TOTAL
PATHOLOGY	29			(1 x 2) +(1x2)	33
PHARMACOLOGY	17				17
INTERNAL MEDICINE (Endocrinology)	12				12
INTERNAL MEDICINE (Nephrology)	13				13
PEDIATRY (Endocrinology)	5				5
PEDIATRY (Nephrology)	8				8
UROLOGY	5				5
OBSTETRICS AND GYNECOLOGY	10	(1x4 st)+ (2X2 st T.Gen. ile)			16
MICROBIOLOGY	7		-	-	7
BIOCHEMISTRY	8		1X4		12
RADIOLOGY	3				3
NUCLEAR MEDICINE	3				3
MEDICAL GENETICS	3	2 (KHD)			5
MEDICAL ETHICS AND DEONTOLOGY	5				5
PUBLIC HEALTH	3				3
TOTAL	127	8	4	4	143
CLINICAL SKILLS EDUCATION (Urinary Catheter Insertion Skill) (Suturing Skill)				2X4	8
ELECTIVE COURSE	6X2				12
MEDICAL ENGLISH	6X2				12
TOTAL	24			8	32
Questions Analysis and Feedback	1				1
Free Run Time	90

AIM AND LEARNING OBJECTIVES FOR COURSE COMMITTEE

Aim:

At the end of 36 working days, the students are expected; to gain knowledge about the clinical physiology of endocrine, reproductive, genital and urinary systems, to comprehend the basic concepts regarding the pathology, biochemistry, mechanisms of diseases and causes of illnesses, infectious agents, clinical features, laboratory and imaging findings, required pharmacological approach and the drugs used for the treatment of the diseases of these systems.

Learning Objectives:

Knowledge:

1. To be able to define terminology and symptomatology of endocrine, reproductive and urinary systems.
2. To be able to explain the hormonal physiology of the pituitary gland and hypothalamus, the pharmacological properties of hormones, the formation, pathology and clinical findings of the diseases of these structures, in childhood and adulthood.
3. To be able to list the functional physiology of the thyroid gland and the effects of hormones in childhood and adulthood, to classify diseases associated with thyroid gland and define the mechanisms of formation, to explain pathologies, clinical features and diagnostic methods of these diseases.
4. To be able to describe and explain the formation mechanisms, laboratory and imaging findings and clinical features of diseases of calcium metabolism, and the drugs used in the treatment of mineral disorders in adults.
5. To be able to explain the underlying mechanisms, biochemistry, pathology and clinical features of congenital and acquired diseases of the adrenal cortex and medulla and recite the corticosteroid and mineralocorticoid drugs used in the treatment of these diseases.
6. To be able to explain the mechanism of formation, the biochemistry, pathology and the clinical findings of diseases of the glucose metabolism, in childhood and adulthood.
7. To be able to list acute and long-term complications of diabetes mellitus and to be able to explain its clinical features.
8. To be able to list pharmacological properties of insulin hormone and drugs used in the treatment of diabetes mellitus.
9. To be able to list the causes of obesity in childhood and adulthood and explain the mechanism of formation, to describe neuroendocrine control of energy metabolism and cite antiobesity drugs.
10. To be able to comprehend the importance of obesity in terms of public health, to be aware of the problems occurring due to obesity, and to possess the knowledge of taking necessary precautions regarding public health.
11. To be able to explain the physiology of growth and to describe its disorders.

12. To be able to list the physiological properties of puberty and to define disorders of puberty.
13. To be able to explain biochemistry of disorders of gonadal hormones, to list the causes of male hypogonadism and define clinical its features.
14. To be able to classify and describe diseases of menstruation and ovulation disorders.
15. To be able to classify and describe the inflammatory and neoplastic diseases of female genital system organs and define pathological features.
16. To be able to explain physiology of fetus and placenta.
17. To be able to classify and describe placental and trophoblastic diseases
18. To be able to explain the physiology of pregnancy, the physiology of lactation, and the genesis of pregnancy.
19. To be able to list pregnancy screening and prenatal diagnostic tests.
20. To be able to explain the methods for genetic counseling.
21. To be able to explain normal delivery physiology and mechanisms of labor.
22. To be able to define the symptoms in gynecology, to be able to list the diagnostic methods based on clinical and imaging findings.
23. To be able to explain reproductive physiology, define and classify infertility, explain diagnosis methods.
24. To be able to define, list and explain birth control methods.
25. To be able to classify and name the pharmacological agents used in contraception.
26. To be able to be aware of the concept of gender in sociological terms, to label the significance of reproductive health and its problems.
27. To be able to describe the tests used in the diagnostic approach to kidney diseases.
28. To be able to understand the evaluation of urinary system symptomatology.
29. To be able to explain renal hemodynamics and urine formation.
30. To be able to define and interpret the mechanisms that form acid-base balance.
31. To be able to describe and interpret liquid and electrolyte system disorders.
32. To be able to evaluate the pathologies of urinary system diseases.
33. To be able to define the diagnosis, pathology and clinical findings of glomerular diseases.
34. To be able to know the approach to proteinuria and haematuria patients.
35. To be able to know the approach to a patient with edema

36. To be able to explain the mechanism of action, pharmacokinetics, toxic effects, drug interactions and clinical applications of diuretics and the drugs used in the treatment of fluid-electrolyte and acid-base balance disorders.
37. To be able to enumerate the congenital anomalies of the urinary system and recall their diagnosis.
38. To be able to interpret the underlying mechanisms of hypertension, to distinguish between primary and secondary causes, to select and interpret the tests for the identification of secondary causes.
39. To be able to define cause-and-effect relationships of acute and prolonged renal failure.
40. To be able to recall specific and nonspecific infections of the urinary system.
41. To be able to tell the types of urinary system stones and to define clinical manifestations.
42. To be able to have knowledge about pathologies of the urogenital system tumors.
43. To be able to label and interpret the imaging methods used in the diagnosis of urinary system diseases.

Skills:

1. To be able to constitute an appropriate and effective communication with patients, patient relatives and health personnel, to be able to choose and administer the necessary basic inspection and diagnostic means
2. To be able to carry out the laboratory diagnosis of infectious microorganisms of the genitourinary system.
3. To be able to perform urinary system examination.
4. To be able to measure the blood pressure.
5. To be able to employ complete urine evaluation with urine strips and microscopy.

Attitude:

1. To be able to comprehend the importance of diseases of endocrine, genital, urinary and reproductive systems, to be able to have a diagnostic approach and to develop a perspective of preventive medicine.
2. To be able to recognize and distinguish the symptoms of the diseases and understand their importance.
